# EXPORTS...

*... their importance to  
the United States economy*

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter—currently selling \$200 billion of U.S. goods abroad—and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per \$1 billion of U.S. merchandise exports.

## Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about \$6 billion of their products annually, an additional \$21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for \$1 of every \$4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas

sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

## Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living—and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to \$57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

# Washington Export Highlights

Washington's exports of manufactured goods totaled \$9 billion in 1981, more than triple the 1977 level. They rose three times faster than production. The state was the seventh largest U.S. exporter of manufactures.

An estimated 66,500 jobs in Washington were directly related to producing manufactured exports in 1981. About 13,700 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus, 80,200 jobs in Washington were dependent on exports of manufactured goods—about one of every four manufacturing jobs in the state.

Washington's share of U.S. agricultural exports totaled \$946 million in FY 1982, over two times the FY 1977 value. In Washington's farm sales, \$1 of every \$3 came from exports.

## **Manufactured exports soared**

Washington's exports of manufactures totaled \$9 billion in 1981, an increase of 222 percent since 1977. The state ranked seventh nationally in sales of these products to foreign countries. Its exports accounted for 5.5 percent of the U.S. total.

Production by Washington firms increased by 69 percent from 1977 to 1981, a much lower rate of growth than in exports. Of the state's expansion in output, more than two-fifths was generated by exports. The export share of output rose from 12.9 percent in 1977 to 24.5 percent in 1981. That proportion was the second highest in the nation, far exceeding that in any other state except Alaska.

Transportation equipment was by far Washington's major export, alone accounting for 72 percent of total foreign sales. Lumber was second in importance, and paper products ranked third. Substantial amounts of nonelectric machinery and manufactured food also were shipped abroad.

Transportation equipment exports—largely aircraft—were valued at \$6.5 billion in 1981, nearly five times the export value estimated for 1977. These foreign sales accounted for two-thirds of the industry's production in the state, and placed the state first nationally as an exporter of this equipment. The 48,100 jobs directly related to exports were 53 percent of this industry's employment in the state.

Washington ranked first in the nation as an exporter of lumber and wood products, as sales abroad grew from \$800 million in 1977 to \$875 million in 1981.

These exports were 21 percent of output, and provided an estimated 4,800 jobs in this industry.

Overseas sales of paper products totaled \$414 million, more than double the 1977 value. The state was the leading exporter nationally in foreign sales of these products. Exports accounted for 15 percent of output in 1981 compared with 10 percent in 1977. Export growth in this period was 27 percent of the increase in production. Production of those exports generated 2,400 jobs.

The state's economy benefits from goods produced not only for direct shipment to foreign destinations but also from those for ultimate export through other states. Tables 6 to 8 show Washington's export figures for manufactures including the output of supplying establishments that furnish parts and materials to the manufacturers producing goods in final form for export. Such indirect exports are particularly important in industries whose products require further processing such as primary metals, fabricated metal products, and chemicals, and also in those industries whose products constitute components and parts for assembly into machinery, electric equipment, and transportation equipment.

The Census Bureau has estimated that the full impact of U.S. exports on Washington's manufacturing activity was 29.2 percent rather than the 24.5 percent attributable to direct exports as shown in Table 3. Thus, of the expanded manufacturing output generated between 1977 and 1981, 47 percent—or \$1 out of every \$2—was due to export-related shipments.

# Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

**Manufactured Exports** in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled \$28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show

the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

**Agricultural Exports** relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

**Other Exports**—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

## Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Washington *					
1976	3,235	42.1	17.2	59.3	4.1
1977	2,805	38.2	14.4	61.1	4.1
1980	8,380	72.5	23.2	113.5	6.2
1981	9,023	80.2	26.3	121.9	6.5
United States					
1976	83,098	2,125.4	11.3	3,452.1	4.0
1977	85,796	1,990.2	10.2	3,258.2	3.6
1980	151,216	2,639.3	12.8	4,808.3	4.8
1981	164,283	2,603.8	12.8	4,794.0	4.7

\* Washington's export-related manufactures were as follows in million dollars: 1976, 4,119; 1977, 3,716; 1980, 10,124; and 1981, 10,773. About 47 percent of the increase in Washington's manufacturing production from 1977 to 1981 was generated by growth in export-related manufactures.

TABLE 1

# Washington Manufactured Exports, Production, and Employment, 1981

- Washington's leading manufactured exports were transportation equipment, lumber, and paper.
- These three industries accounted for 86 percent of Washington's total exports of manufactures.

Industry group	Production (million dollars)	Estimated exports	Exports as percent of production	Estimated employment related to exports (thousands)	Employment related to exports as percent of total employment
<b>Total<sup>1</sup></b>	<b>36,790</b>	<b>9,023</b>	<b>24.5</b>	<b>66.5</b>	<b>21.9</b>

TABLE 5

# United States Agricultural Exports\* by State

- Exports accounted for over one fourth of total U.S. farm sales in FY 1982 and for more than 25 percent of sales from 20 of the states.
- Illinois, Iowa, California, and Texas each exported more than \$2 billion of farm products.

# Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

## Direct Exports and Indirect Requirements to Support Exports

Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

### Wheat leading farm export

Washington's share of U.S. agricultural exports in FY 1982, including some manufactures of farm origin, totaled an estimated \$946 million, over two times the FY 1977 level. Wheat and flour accounted for over half of the total. The state was the second largest U.S. exporter of vegetables with FY 1982 deliveries of \$196 million. Fruits were among the fastest growing of Washington's overseas sales, with FY 1982 deliveries four times the FY 1977 level.

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 51 percent of the rise in farm sales and added substantially to the income of Washington farmers. In this period, the export contribution to each dollar of the state's farm sales increased from 23 to 33 cents.

### Second ranked salmon exporter

Washington exports of fishery products in 1981 were valued at \$66 million. These were in fresh, frozen, canned, and cured forms. The state ranked a distant second to Alaska in U.S. exports of salmon. Foreign sales were valued at \$44.5 million, \$15 million greater than in 1977. Shipments of shrimp amounted to \$1.4 million, and those of cured fish totaled \$9.7 million.

### Ferrosilicon exported

Washington exported ferrosilicon valued at \$194 million in 1981. This amount was 59 percent greater than the \$122 million worth exported in 1977. The state also shipped abroad iron and steel scrap estimated at \$32 million in 1981.

### Export employment grew

Washington's \$9 billion worth of manufactured

exports provided direct employment for an estimated 66,500 workers in 1981. Those jobs constituted 21.9 percent of the total direct employment in manufacturing in the state. From 1977 to 1981, the number of workers engaged in the production of manufactures rose by 15 percent, while employment directly related to exports jumped by 144 percent. More than four-fifths of these workers were concentrated in the transportation, lumber, and non-electric industries. These jobs accounted for between 13 and 53 percent of the work force in those industries.

In addition, an estimated 13,700 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 80,200 jobs in Washington were directly or indirectly dependent on exports of manufactured goods. This was 26.3 percent of all manufacturing employment in the state.

Three-fifths of the jobs dependent on manufactured exports were concentrated in the transportation equipment industry. These jobs accounted for one out of two jobs in that industry.

An additional 41,700 jobs were generated in non-manufacturing industries that supply materials and services supporting manufactured exports. Washington's total employment related to manufactured exports amounted to 121,900 jobs.

It is estimated that Washington's farm employment related to exports in 1982 amounted to about 24,400 or one out of every three farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

---

## STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information/Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures*, M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer

Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for \$2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
